

Library Management - Part 2

C++ Source Code (Search Book ID in Array)

```
#include <iostream>
using namespace std;

int main()
{
    int book[5];
    int searchID;

    cout << "Enter 5 Book IDs:
";

    for (int i = 0; i < 5; i++)
    {
        cin >> book[i];
    }

    cout << "
Enter Book ID to search: ";
    cin >> searchID;

    for (int i = 0; i < 5; i++)
    {
        if (book[i] == searchID)
        {
            cout << "Book Found!";
            return 0;
        }
    }

    cout << "Book Not Found!";

    return 0;
}
```
